BOL / NO-CODE VOICE AGENT BUILDER

Build a voice agent by talking to Bol.

Describe what you want. Bol's AI builds it with you, through a conversation. No code. No technical knowledge needed.

About 3 minutes

Average time to create a voice agent. Bol is free to start.

Start with a conversation

Tell Bol who the agent should help and what it should do. Bol asks for the details it needs, then builds the agent from your conversation.

No knowledge base? Bol can make one.

Bol can do deep research on the web and build a knowledge base for your agent. Already have information to share? Add it to the conversation.

Make it yours

Choose any language, or use several in one agent. Set its greeting, voice, custom instructions, knowledge, and conversation style.

Talk naturally

Interrupt the agent mid-sentence. It stops speaking, listens, and responds to what you said.

Start with an idea.

Tell Bol what your voice agent should do. A few minutes later, you'll be talking to it.
